

Classification Model Project 3

Data Science bootcamp T5

Predicting Ratings of Mobile Application

Predicting rating is essential for any mobile applications development company that needs to make successful applications. In our project, rating was predicted with different methods and their results compared.

Target:

The main objective of building this classification model is to predict the rating of mobile applications.

Tools:

Sklearn
Random m Forests,
K-Nearest Neighbors.
SVM.

Dataset:

Google play store Apps dataset from Kaggle.

Teamwork:

Khulud
Rana
Ohoud.
